- Springboot
- React
- GitHub
- Visual Code
- Scrum
- Kanban

SKILLS

Effective Communication
Problem Solving
Quiality Management
Project Management
Proactivity
Team Work

EDUCATIONAL BACKGROUND

- **Mechatronics Engineer:** Universidad Tecmilenio (Guadalajara, Jal)
- **High School:** Prepa Tecmilenio (Culiacán, Sin)

PROFESSIONAL EXPERIENCE

School Project: Programming with Embedded Systems.

(Jun 20 – Jan 21)

- **Quality Control:** Design and development of an embedded system in C language that simulates the functionalities of an automotive dashboard, capable of monitoring and displaying real-time information to the user. The system integrates sensors and communication modules to provide an interactive and clear experience, ensuring data visualization accuracy and efficient communication of relevant information to the driver.

Development Intern: HP Hewlett-Packard

(Jan 21 – May 21)

- **Development of a desktop applicationqewr:** Development of an automated tracking code system compatible with multiple shipping platforms. The project includes programming an interactive user interface with React and a backend developed in PHP, optimized to ensure the system's efficiency and scalability..

Client-Side Tester: Transportes ALGEZA

(May 21 – May 22)

- **Quality Management in Client-Side Project:** Testing on a web application designed to monitor automotive systems, ensuring proper functionality and performance. The testing approach included validation of features, integrations, and system usability, using Selenium as a recognized tool for web test automation. This ensured the platform's reliability and efficiency across various use cases.
- **Additional Work:** Logistical control and monitoring of transportation units, which was necessary to confirm the proper functioning of the software involved in the units.

Junior Programmer: Coppel

(Jan 22 – Jan 24)

- **Employee Offboarding System:** Development of an automated system for recording employee offboarding, including the generation of detailed reports on termination reasons. The user interface was built using Angular, providing an interactive and intuitive experience. The backend, developed in Spring Boot, handles data retrieval from an SQL database and the creation of RESTful APIs, enabling efficient and scalable communication between the client and server.
- **Sales Item Report:** Development of a C++ system for generating dynamic reports that display price changes of items in an inventory. The system allows filtering reports by item type, department, price range, or time period, making it easier to analyze price trends in detail.
- **Em ploye Pasword Managment and Creation:** Development of a secure password generation system, with a user interface implemented in Angular and a backend in PHP. The system allows creating passwords with specific characteristics, such as length, inclusion of special characters, and uppercase letters. Once generated, the password is sent to the user's professional email. Additionally, the platform enables the user to change the password directly from the same interface, ensuring easy and secure management of credentials.
